

AI Tools: Data Extraction & Curation Guidelines

1. Find the Best Tools

Do not try to collect every AI tool on the internet.

There are **millions of AI tools**. Our long-term target is up to **50,000 high-quality tools**, but we will build this in batches.

For the first batch:

Find and submit the best 1,000 AI tools.

After that, we will expand in **5,000-tool batches**.

The objective is **not to reach 50,000 quickly**. The objective is to make every batch high quality.

Prioritize tools that are:

- Recently launched and gaining real usage
- Solving a meaningful problem
- Actively maintained
- Currently accessible and working
- Showing real user/adoption signals
- Clearly differentiated or genuinely useful
- Worth recommending to an AIOrbis user

Older tools can be included **only when they are still actively used, maintained and highly relevant**.

Do not spend time collecting large numbers of outdated or abandoned AI tools.

2. Primary Discovery Sources

The two **primary sources** for discovery are:

1. There's An AI For That

<https://theresanaiforthat.com/tools/>

2. Creati.ai

<https://creati.ai/ai-tools/>

These should be reviewed systematically first.

Additional sources

Use the other sources provided below for **discovery, cross-checking and enrichment**:

- ToolPilot.ai
- Futurepedia
- Dang.ai
- OpenTools.ai
- TopAI.tools
- PoweredByAI.app
- AI Valley
- EasyWithAI
- Foundr.ai
- RankMyAI
- AIPURE
- AIToolNet
- AIChief
- Aixploria
- The Rundown AI
- Product Hunt
- Official company/product websites
- Startup databases
- Trusted AI/technology publications

Do not randomly search the internet and add whatever appears.

Use:

Discovery → Official website → Verify → Enrich → Deduplicate → Curate

3. What Makes a Tool Worth Adding?

Before adding a tool, ask:

Would we confidently recommend this tool to an AIOrbit user today?

If the answer is no, **do not add it**.

Prioritize:

High user value + active product + meaningful usage + good quality + current relevance.

Strong preference

New + high quality + useful + growing

over

Old + unknown + low usage + stagnant

However, an older tool should still be included if it has strong ongoing adoption and remains one of the best tools in its category.

4. Reject These Tools

Do not add:

- Dead/shut-down tools
- Websites that no longer work
- Abandoned products
- Tools with no meaningful functionality
- Spammy/SEO-generated tool websites
- Duplicate listings
- Fake/unverifiable products
- Extremely low-quality tools
- Outdated tools with little/no current usage
- Tools that are merely minor copies of another product
- Tools whose information cannot be reliably verified

Important

A tool appearing in a directory **does not automatically mean it belongs in AIOrbit**.

Directories are for discovery. **The official product website is the primary source for verification.**

5. How to Select the Best Tools

When you find many tools doing the same thing, **compare them instead of adding all of them.**

For example, if you discover 100 AI writing tools:

Identify the strongest → compare → select the best.

Use this simple scoring system:

Factor	Weight
Product quality & capability	25
Real user value / usefulness	20
Current usage / adoption	15
Activity & maintenance	15
Product maturity / reliability	10
Recency / momentum	5
Differentiation	5
Information quality / verifiability	5
Total	100

Ranking

90–100 → Exceptional — Strongly prioritize

80–89 → Excellent — Include

70–79 → Good — Include selectively

60–69 → Average — Usually skip

Below 60 → Reject

Quality and current usefulness matter more than age.

6. Recency & Activity Are Extremely Important

For every candidate, check:

- Launch date
- Last update/activity
- Current website availability
- Whether the product is still being developed
- Recent releases/features
- Current pricing
- Current user/adoption signals
- Whether the product is still actively promoted/supported

Priority order

Recently launched + high quality + real usage

↓

Established + actively maintained + highly used

↓

Old + declining/stagnant

The third category should generally be excluded.

Do not build a historical database. Build a current AI tools database.

7. Deduplication

This is a major priority because the same tool will appear across many directories.

Before adding a tool, check:

- Official website/domain
- Company/developer

- Product name
- Product URL
- Same underlying product
- Same company/product with different directory listings

If the same tool appears on:

TAAFT + Creati.ai + Futurepedia + AIPURE + Product Hunt

create **ONE AIOorbit record**.

Use the other sources for:

- Discovery
- Validation
- Additional information
- Usage/adoption signals

Do not create duplicates because:

- The tool appears on multiple directories
- It has multiple categories
- It has different pricing plans
- It has different landing pages
- It is listed under a slightly different name

8. Data to Extract & Enrich

Once a tool passes the quality check, collect:

Basic

- Tool name
- Company / developer
- Official website
- Logo / image
- Country
- Version, if available
- Launch/release date
- Current status
- Short description
- Detailed overview

Product

- Primary task
- Categories / tags
- Key features
- Main use cases
- AI capabilities
- Inputs
- Outputs
- Supported platforms
- Integrations
- API availability
- Open-source status
- Signup requirement

Pricing

- Pricing model
- Starting price
- Free plan
- Free trial
- Important usage limits, where relevant

Quality

- Pros
 - Cons
 - Limitations
 - AIOrbit summary/verdict
 - Usage/adoption signals where available
 - Last verified date
 - Discovery source
 - Verification source
-

9. Inputs & Outputs Must Be Specific

Do not write vague information such as:

Input: AI content

Output: AI content

Be specific.

Example

Inputs: Text, PDF, DOCX, URL

Outputs: Summary, structured report, extracted data

or:

Inputs: Text, Image

Outputs: Image, edited image

Only record formats that are **actually supported and verified**.

10. Verification Rules

For every selected tool:

First:

Find it through:

TAAFT / Creati.ai / other approved source

Then:

Open the **official product website**.

Verify:

- Product exists
- Product is currently accessible
- What it actually does
- Pricing
- Features
- Current status
- Company/developer
- Launch/update information where available

If reliable sources disagree:

Prefer the official source.

If information cannot be verified:

Leave the field blank. Do not guess.

We can enrich missing information later.

11. Final Batch Target

Batch 1

1,000 best tools

↓

Batch 2

5,000 additional best tools

↓

Batch 3

5,000 additional best tools

↓

Continue until we eventually reach the long-term target of approximately:

50,000 high-quality AI tools

But **never lower the quality threshold to hit the number.**

If only 800 tools genuinely meet the standard in the first review, submit 800.

Golden Rule

We are not collecting AI tools. We are curating the AI tools worth knowing about.

TAAFT + Creati.ai first → discover broadly → verify officially → check activity/usage → remove duplicates → score → select the best → enrich accurately.

For Batch 1: Find the best 1,000 — not the first 1,000.
